Meridian Technology Group announces partnership with Information Security Corporation.

VICTOR, NY— Meridian Technology Group announces it has been selected as a preferred business partner of Information Security Corporation (ISC). Meridian is a provider of Information Technology Strategies with special expertise in security and intrusion detection and prevention.

ISC specializes in the design and development of standards-conforming conventional and public key encryption and authentication software. ISC's products are used by numerous U.S. Federal government agencies, major corporations, as well as small to medium-sized businesses. ISC products offer scalable, robust encryption solutions, deployable in mainframe, desktop and mobile platforms, enabling organizations to securely share and store confidential information of any type.

Joseph Caputummino, CEO of Meridian Technology Group, commented on the partnership with ISC. "We're pleased that ISC views Meridian's multi-faceted, consultative approach to this important market as a viable channel for distribution. ISC software provides Meridian with versatile new tools that can enhance security plans for a wide variety of clients. Their products are affordable, intuitive - easy to understand and simple to implement."

"We are delighted to partner with Meridian Technology Group", said Andy McDermott, Vice President of Sales for Information Security Corporation. "Meridian meets all the criteria of a best-of-breed business partner for ISC. Their comprehensive security practice, coupled with their extensive customer base and market reach, will contribute greatly to ISC's effort to capture the rapidly growing information security market across the region".

While conventional encryption uses the same key to both encrypt and decrypt data Public Key Infrastructure (PKI) uses associated private and public key pairs to encrypt and/or decrypt. More information on conventional and public key encryption is available at www.mertech.com and www.infosecorp.com.

Common applications of public key encryption include securing e-mail transmissions, sharing and authenticating files transmitted over a network or the Internet among PCs, laptops and hand-held computers; protecting and restricting access to information on an individual or group basis; storing files securely on PCs, laptops, hand-held devices and servers.

About Meridian Technology Group:

Meridian Technology Group provides customized, individual solutions centered around four unique practices: Security, Consulting, Integration and E-Solutions. Key industries served by Meridian include healthcare, higher education, professional services, manufacturing and state and local governments. Headquartered in Victor, New York, Meridian serves the Northeast corridor region, and has sales and/or support facilities in Albany, Buffalo, New York City and Syracuse.

About Information Security Corporation:

Founded in 1989, ISC specializes in the design and development of cryptographic products that conform to all Federal and industry standards. ISC's popular products include SecretAgent, CertAgent, SecurePhone, SpyProof!, several cryptographic development toolkits, and the CDSA 1.2 CSP distributed by Hewlett-Packard under the Praesidium brand name. AT&T has also marketed ISC's products since 1993.
