FOR IMMEDIATE RELEASE

Information Security Corporation Releases SecretAgent® 5.7 for Linux, Mac OS X, and Solaris

DEERFIELD, IL – September 16, 2003 — Information Security Corporation (ISC) today announced the immediate availability of SecretAgent 5.7 for Linux, Mac OS X, and Solaris. The latest ports of ISC's popular encryption and digital signature utility include many of the enhancements previously provided in SecretAgent 5.7 for Windows: support for the S/MIMEv3 CMS file format, improved X.509 certificate management and LDAP directory access, the ability to create self-decrypting archives for a wide range of target platforms, and full support for PolicyAgent™ security policies. With this release SecretAgent 5.7 strengthens its leadership in the cross-platform desktop security market.

Widely recognized for its ease of use, scalability, and platform independence, SecretAgent ensures confidentiality and authenticity whether it is used by an individual interested in protecting sensitive files stored locally or by someone sending sensitive data around the world.

"For over a decade SecretAgent has helped government and corporate customers worldwide to protect their most sensitive data," said Thomas J. Venn, ISC's President. "The latest release of SecretAgent for UNIX-based platforms continues ISC's commitment to supporting the widest possible range of computer systems. Enterprise customers demand standards compliance, platform independence, and robust administration and automation capabilities. SecretAgent provides all these critical features at an affordable price."

Pricing and Availability

SecretAgent 5.7 for Windows, Linux, Mac OS X, and Solaris is immediately available for worldwide shipment. (Command line executables are also available on all supported platforms.) A single-user license for the GUI version is \$179.95 on Microsoft Windows and \$265.95 on most UNIX-based platforms. Site licenses and discounts for larger quantities are available. Existing SecretAgent users on a maintenance contract are entitled to a free upgrade.
