FOR IMMEDIATE RELEASE

ISC Releases SecretAgent® 5.9

DEERFIELD, IL – July 27, 2005 — Information Security Corporation (ISC) today announced the immediate availability of SecretAgent 5.9, the latest version of its leading file encryption and digital signature utility. SecretAgent 5.9 adds four significant enhancements: the ability to replace recipients on existing encrypted archives, support for server-mediated decryption using SecretAgent Document Access Servlet™ (DAS™), optional plaintext disposition controls, and support for Entrust® profiles.

Widely recognized for its ease of use, scalability, interoperability, and platform independence, SecretAgent ensures the confidentiality and authenticity of sensitive files whether they are stored on a local hard drive or transmitted between systems, with or without a formal PKI. In an enterprise setting, SecretAgent supports centralized security policy and software updating, emergency key recovery, as well as state-of-the-art PKI and LDAP directory support. Support for DAS-mediated decryption allows sensitive documents to be easily shared among the members of one or more Communities of Interest.

"SecretAgent has helped our government and corporate customers protect their most sensitive data for over a decade." said ISC President Thomas J. Venn. "SecretAgent 5.9 represents the beginning of a transformation from simple file encryption and digital signature utilities to secure document sharing applications that allows users to seamlessly access data to which they've been granted access whether individually or as a member of a group. While many security companies focus on securing data in a particular place, ISC is committed to protecting the data wherever it goes."

Pricing and Availability

SecretAgent 5.9 is now available for worldwide shipment. A perpetual single user license with one year of maintenance and support for the Windows GUI version is \$179.95. Customers on a maintenance contract may obtain an upgrade to release 5.9 free of charge by contacting ISC or visiting www.infoseccorp.com. A SecretAgent/Java GUI is available for Linux, Mac OS X, and UNIX systems, while scriptable command line versions of SecretAgent are available for all popular computing platforms. Contact ISC for site license pricing, quantity discounts, and additional product information.

About Information Security Corporation

Founded in 1989, ISC has focused on the development of affordable encryption and authentication software products designed around well-established cryptographic standards. The most security-conscious government agencies and corporations worldwide have adopted ISC products.
